Career Summary

Software Engineer with production experience, transitioning into **ML/AI engineering** through applied projects in **RAG systems, computer vision, and MLOps**. Built end-to-end ML/AI applications spanning **NLP, LLM applications, reproducible ML pipelines, and CI/CD** using **Python, scikit-learn, TensorFlow/Keras, PyTorch, DVC, MLflow, AWS, and FastAPI**. Brings a strong foundation in shipping and maintaining production software systems to **ML/AI development**.

Skills

Core Programming	Python, SQL, TypeScript, OOP
Backend & API Development	FastAPI, RESTful APIs, Async Programming
Frontend	React, Next.js
Machine Learning	scikit-learn, XGBoost, Logistic Regression, TF-IDF, Feature Engineering, Model Evaluation
Deep Learning	TensorFlow/Keras, PyTorch, CNNs, Computer Vision, Hugging Face Transformers
Generative AI	RAG, LLM Applications, Prompt Engineering, Sentence Transformers, Embeddings, Vector Search, ChromaDB
MLOps & Pipeline Engineering	DVC, MLflow, Experiment Tracking, Reproducible ML Pipelines, CI/CD, GitHub Actions
Cloud & DevOps	AWS (S3, EC2), Docker, Git
Testing & Quality	Pytest, Unit Testing, Structured Logging

ML / AI Projects

RepoMind — RAG Document Q&A System | [GitHub](#)

- Built an end-to-end **document Q&A RAG application** that allows users to **upload arbitrary PDF, Markdown, and TXT documents and ask natural-language questions** about their content.
- Implemented sentence-aware chunking (**~180 words/chunk, 30-word overlap**), **384-dimensional Sentence Transformer embeddings**, ChromaDB vector search, and Groq-hosted LLM generation.
- Implemented deterministic chunk IDs and page-level metadata for **source-level traceability** from retrieved context back to the original document.
- Evaluated retrieval quality across **30 questions**, achieving **53.3% Recall@1, 70% Recall@3**, and **0.60 MRR**; identified 9 retrieval failures as a baseline for further retriever improvements.
- Added **6 Pytest unit tests** covering text cleaning, sentence splitting, chunk sizing, metadata integrity, and edge cases; integrated automated testing with GitHub Actions.

MLOps End-to-End Pipeline — Sentiment Classification | [GitHub](#)

- Built a **7-stage reproducible MLOps pipeline** with DVC for data ingestion, validation, preprocessing, feature engineering, training, and evaluation.
- Trained **TF-IDF + Logistic Regression** on **39,665 reviews**, using **119K-dimensional TF-IDF vectors** and achieving **89.83% accuracy and 0.90 macro F1**.
- Compared **Logistic Regression, Multinomial Naive Bayes, and Linear SVM**, with Linear SVM reaching **90.36% accuracy**.
- Automated data-quality checks, detecting and removing **418 duplicate reviews** while validating schema and nulls.
- Integrated **MLflow with AWS S3 for experiment tracking and artifact storage**, and **GitHub Actions for automated DVC pipeline reproduction**.

Computer Vision — Face Matching & Image Classification | [Face Matching GitHub](#) | [Image Classification GitHub](#)

- Built a **CNN-based cat-versus-dog classifier from scratch** using TensorFlow/Keras, data augmentation, and separate training, validation, and test sets, achieving **80.24% test accuracy**.

- Developed a **ViT-based face-matching system** using PyTorch and Hugging Face Transformers to generate image embeddings and compare faces using cosine similarity.
- Implemented **multi-image reference embeddings with mean pooling**, configurable similarity thresholds, input validation, error handling, and structured outputs for API integration across CPU and GPU environments.

Professional Experience

Freelance Full-Stack Developer	Art Evo	Feb 2026 – Jun 2026
• Designed and developed a production e-commerce platform as the sole developer, owning frontend development, backend integration, authentication, order management, payment integration, and deployment. • Implemented Clerk-based authentication with user-linked profiles, mobile numbers, and address management, alongside customer workflows for cart, wishlist, checkout, and order tracking. • Built a seller dashboard for product CRUD and order management, with status updates synchronized to customer orders, reducing manual order-status communication. • Integrated Razorpay payments with a webhook-based event pipeline to synchronize payment and order states, providing customers with secure checkout and reliable payment confirmation. • Replaced manual WhatsApp-based order updates with live website tracking, increasing direct website orders by ~70% and effectively eliminating routine status-update requests. • Worked directly with the client through requirements gathering, iterative revisions, feature updates, and deployment, and implemented CI/CD with GitHub Actions for automated Vercel deployments.		
Family Business	India	Oct 2024 – Feb 2026
• Relocated to India to support family business while managing freelance software development and transitioning into ML/AI engineering.		
Full-Stack Developer	Image Express (Ireland)	Jul 2023 – Oct 2024
• Developed and maintained a React/Next.js e-commerce platform for digital photo printing and custom gifts as part of a four-person engineering team. • Built and integrated 10+ FastAPI endpoints backed by MongoDB for product, cart, order, and customer workflows. • Delivered reusable React components, API integrations, validation, and end-to-end workflows for product discovery, checkout, and order tracking. • Reduced redundant network requests by ~26% through shared data fetching, request deduplication, and client-side caching, improving responsiveness across key customer workflows.		
Software Development Intern	Lince Soft Pvt Ltd.	Sep 2019 – Dec 2020
• Assisted senior developers with frontend and backend development, contributing to feature implementation and application maintenance. • Contributed to bug fixes and small-scale feature development while transitioning from a Mechanical Engineering background into software engineering. • Participated in code reviews and development workflows, building foundational software engineering experience.		

Education and Certifications

MSc. Computing and Technology with Advanced Practice (Computer and Information Science)	Northumbria University (London)	2021 - 2023
B.Tech Mechanical Engineering	CVR College of Engineering (India)	2015 - 2019

Supervised Machine Learning Stanford Online | Python Programming Boot Camp
